

Replication Instructions

The instructions below describe how to replicate the statistical analysis presented in Carrubba, Clifford, Matthew Gabel, and Charles Hankla. 2008. "Judicial Behavior Under Political Constraints: Evidence from the European Court of Justice." *American Political Science Review* 102 (4): 435-452.

The dataset is in STATA (.dta) format and can be downloaded from the same website as these instructions. We also provide a STATA Do File that estimates the models presented in the tables in the article. The Do file must be modified to specify the location of the dataset. The variables are defined in the dataset. Use the 'describe' command in STATA to read the label for each variable.

Dataset: apsrreplication.dta

STATA Do File: apsrreplication.do
